Supplementary Video S1. Beating of iPSC-CMs seeded on an ITO chip. Representative images of spontaneously beating iPSC-CMs cultured on an ITO chip. Scale bar: 100 μm. iPSC-CMs: induced pluripotent stem cell-derived cardiomyocytes, ITO: indium tin oxide.

Supplementary Video S2. Beating of iPSC-CMs on ITO chip after CTL or DOX treatment. Comparison of beating activity between CTL (0.1% DMSO) and DOX (3 μM doxorubicin) after 2 days of treatment. Scale bar: 100 μm. iPSC-CMs: induced pluripotent stem cell-derived cardiomyocytes, ITO: indium tin oxide, CTL: control, DMSO: dimethyl sulfoxide, DOX: doxorubicin.
